

PRESS RELEASE

GrayWolf Sensing Solutions

FOR IMMEDIATE RELEASE: January 21st, 2009

WolfPack™ Modular Indoor Air Quality Area Monitor

GrayWolf Sensing Solutions of Trumbull, Connecticut introduces a new Area Monitor for Indoor Air Quality (IAQ) and for other environmental monitoring applications.

The WolfPack is a fully *modular* system: plug in one, up to three GrayWolf DirectSense® probes with up to six sensors installed per probe. Add a particle counter, airspeed probe, ΔP or other sensors: up to 21 parameters may be monitored simultaneously. The same probes, as part of the modular design, may alternately be connected to a Windows Mobile Pocket PC® or Vista® OS mobile PC for hand-held, walkthrough surveys, spot checking and spot logging.

Available parameters include: TVOCs, Carbon Dioxide, %RH, °C/°F, Particulates, auto-zeroing Differential Pressure and Air Velocity. Sensors for these parameters all exhibit rapid response and are highly accurate. In addition, up to 18 specific electrochemical gas sensors (CO, O₃, NH₃, NO₂, NO, H₂S, SO₂, Cl₂, HCN, HCl, etc.) are available.

The WolfPack has a tactile color screen and is powered by an embedded WinCE® operating system running GrayWolf's WolfSense® 2009 application software. WolfSense 2009 offers a broad range of user-friendly features. A unique workflow feature handholds users through data-logging set-up; easily customized for very specific applications, allowing less experienced operators to take advantage of more advanced functions. On-board features also include: Video help, Parameter details (typical sources, typical background levels, health effects, etc.), Sensor info (basic sensor care, cross-interferences, specifications, etc.), Application related documents, In-situ text notation, In-situ audio notation...and much more.

Once measurements have been trend-logged over time; review, analyze and report on the data and field-collected notes with the included WolfSense PC software. Optional Advanced Report Generator software automates the entire reporting process.
